

Team Evaluations:

As stated before in the Appendix of the Proposal each member was responsible for their respective aspect of this project as well as collaborating with each other to finish the Project.

Each member will summarize their contributions to this project in their respective slots.

Caleb Yasaki:

In charge of file input, storage, use and display of the audio samples. Furthermore, there is a legend that lets the user know which samples are being occupied and which ones are empty. There is an additional function that lets the user save a sample number as a .wav file that will be saved to the MATLAB folder in the user's computer. Along with this aspect lined out in the Proposal, this member also assisted in the GUI design and chopping of a sample.

Feixiong Zhen:

As stated before in the Appendix in charge of GUI design and tone generation. Our group members have set up meetings and worked together. Used app designer to code the GUI. Coded the callbacks for the frequency and amplitude changer of the sound.

Eduardo De Siqueira:

As determined in the Appendix proposal, was responsible for the effects and chopping. Coded the callbacks for each one of the effects (voice removal, delay/echo, tone control, speed up, sample reversal), as well as the callback for chopping the samples by the user with help from Caleb for debugging. The effects and chopping were coded to be activated by the user using buttons. For chopping, boxes for the user to input the start and end times were added.

Appendix:

All team members agree that each member has performed their task and contributions as stated in their respective summary.
